### 1945 SEMI-ANNUAL

NAVAL STORES REPORT

011

Production, Distribution, Consumption and Stock's

of

TURPENTINE AND ROSIN

of the

UNITED STATES

By Crop Years

April 1, 1945 - Septembor 30, 1945

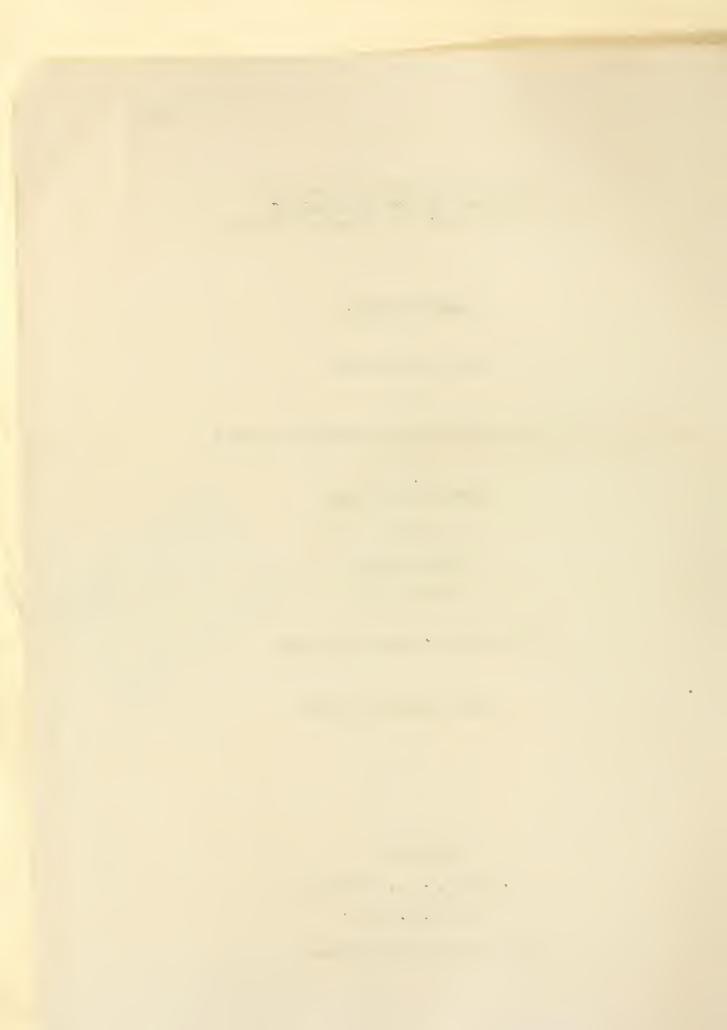

Issued November 19, 1945

Compiled by

I. E. Knapp, L. A. Goldblatt

and M. M. Hornor

Naval Stores Research Division

### FOREWORD

This is the tenth Semi-Annual Naval Stores Report on production, consumption, and stocks of naval stores. Annual reports, covering the entire naval stores crop year, April 1 - March 31, are also issued. These reports are issued under Federal Act 278, authorizing and directing the Secretary of Agriculture to collect, compile and publish statistics and essential information relating to spirits of turpentine and rosin produced, hold and used in the domestic and foreign commerce of the United States.

If production figures for this period are used as a basis for estimating this crop year's probable production, the fact that gum naval stores production is seasonal should be borne in mind. Wood naval stores production, on the other hand, is not seasonal but is based largely upon probable consumer demand and to some degree upon labor.

As in previous reports, carryover (stocks) of turpentine and rosin is separated into gum and wood products. Stocks of wood rosin do not include so-called "B wood rosin." While sulphate wood turpentine is carried in the regular production and carryover tables, data on tall oil ("liquid rosin") are in a table separate from gum and wood rosin. Pending the selection of a proper term, we continue to refer to the mixture of rosin and fatty acids recovered by the acidification of the soap curds (black liquor soap) obtained in the production of sulphate pulp as tall oil. The tall oil so obtained contains approximately 12 percent of rosin acids.

The data on production, consumption and stocks are expressed in commercial units: For turpentine - barrels of 50 gage gallons; and for rosin - drums of approximately 520 pounds net weight. A unit of naval stores consists of one barrel of turpentine and two and two-thirds drums of rosin. Carryover figures do not include gum turpentine or rosin producible from crude gum on hand.

Statistics on exports and imports of turpentine and rosin are now available and are included in this report.

Tables 9a and 9b on pages 9 and 10 of this report are summaries of the supply and distribution of turpentine and rosin for the past eight crop years. Data on experts and imports which were not published during the war have now been released and are included in these summaries. For ready comparison, previously published rosin figures have been recalculated to drums of 520 pounds not weight.

These reports are designed to be of use to the industry — producer, factor, distributor, and consumer. Every effort is made to obtain complete and accurate information but the completeness, accuracy, and promptness of issue depend upon the cooperation of those reporting. In accepting the statistics given in this report, as well as those in previous reports, it should be borne in mind that the Bureau of Agricultural and Industrial Chemistry merely assembles the figures from the individual reports received and is not responsible for their accuracy.

The Bureau of Agricultural and Industrial Chemistry extends its thanks to those producers, factors, distributors, and consumers who have so kindly cooperated in furnishing the requested information. The assistance of Mrs. Clotilde H. Oubre in tabulating the data for this report is gratefully acknowledged.

### SULMARY OF TURPENTINE

Apparent U.S. consumption3/	634,249	350,053 284,196	719,163	430,371 288,792

<sup>1/</sup> Separation of gum and wood rosin consumption will be limited for the present to the total reported.

<sup>2/</sup> This discrepancy between the total industrial consumption reported and the apparent U. S. consumption is, no doubt, due in large part to errors in individual reports amplified by the change from the former barrel of 500 lbs. gross weight to the present drum of 520 lbs. net weight. Another factor may be the failure on the part of some consumers to distinguish between rosin and modified or derived rosins in their reports with a resulting duplication of reported consumption.

<sup>/</sup> From Table 1b, page 2.

TABLE 10a - WEIGHTED / LVERAGE MONTHLY AND CROP YEAR PRICES OF GUN SPIRITS OF TURPENTINE - 1930-31 to 1945-462/

year average price was obtained by multiplying each monthly price, by the combined reported receipts during that month at Savannah, Jacksonville, and Pensacola and dividing the total of these figures for the crop Prices for 1921-22 to 1930-31 crop years will be found in provious annual and semi-annual reports in this year by the total receipts for that erop year, thereby giving the menths of heavy receipts and of low receipts their proper relative value. For 1941-42 and thereafter, only simple averages are shown. Prior to 1941-42 monthly prices were obtained by averaging Wodnesday and Saturday closing prices.

2/After Movember, 1935, Wednesday and Friday Savanah prices were used when there was no queted Saturday market.

L/ Beginning July 1, 1940, queted Savanah turpentine prices were explusive of package. To complete this table and to present figures comparable with provious quetations, beginning July 1, 1940, 6 cents per gallen has been added to the Savannah quotations. Sources of data: Florida inspections and monthly receipts at Savannah, Jacksonville, and Pensacela, The Naval Stores Review, Daily Market Reports of the Savannah Exchange, Jacksonville and Pensacela Chambers of Commerce and Economic Analysis Unit, General Crops Section, Agricultural Adjustment Administration.
